

RAPIDITY & RELIABILITY

Standard: AS NZS1170.2-2021

At R2,

we believe that the future of energy should be as simple, affordable, and accessible as possible. That's why we've designed a solar mounting system that combines innovation with practicality, empowering installers to get solar panels up and running faster and more efficiently than ever before.

Vision

Leading the charge to make solar power more accessible, efficient, and affordable.

Mission

Make solar energy more accessible for everyone.

Rapidity **With High Efficiency**

Every part of R2 has been designed to simplify handling for typical installations. With pre-assembled components and straightforward adjustments, it offers a practical solution for installers aiming to save time. By reducing the complexity of traditional mounting systems, R2 streamlines the process from design to delivery. Its efficient design and kit offerings minimizes the number of parts, making it a cost-effective choice for achieving reliable results in standard applications.

Reliability **You Can Trust**

When it comes to solar installations, reliability is non-negotiable. R2 is built to stand the test of time, with weather-resistant, corrosion-proof materials that will ensure your solar panels stay securely in place for years to come. We've engineered R2 to withstand the typical conditions—whether it's standard heat, rain, or wind—so you can rest easy knowing that your system is durable and dependable.

Tile Roof Solar Kits

The R2 Solar Mounting System for Tile Roofs is designed for quick and hassle-free installation. Its user-friendly components ensure a straightforward setup, reducing labor time and installation costs. With minimal tools required and clear instructions, your solar installation process is efficient, saving both time and effort.

Kilp-lok Roof Solar Solution

R2 Klip-lok Roof Solar Solution provides enhanced watertight performance for solar installations by eliminating roof penetration, ensuring safety and structural integrity without compromising on watertightness. It accommodates non-penetrative bracket requirements and offers versatility for both flush-to-roof installations using an L-feet interface and tilted systems.
